

## MEKASTER AIR OPERATED PUMP

**Mekaster Tools** has recently launched a new product catering to the needs of the heavy industries.

The **Mekaster Air Operated Pump** units are designed and constructed to be failsafe, user friendly, lightweight and compact. They work on a simple but efficient principle, power is magnified through differential piston areas. A large pneumatic piston drives a smaller hydraulic piston, which provides fluid flow at high pressure. Pump assemblies can be supplied in many combinations. A choice of air motors and pressure gauges are available to ensure that the correct assembly is specified to meet the Bolt Tensioning requirements.
